CON	CONCLUSION	
ANN	NEX: NATIONAL PLAN OF ACTION IMPLEMENTATION PROGRAMME	65

INTRODUCTION

Burkina Faso has made accountability a linchpin of its governance. Based on this general vision and in accordance with the basic documents of the African Peer Review Mechanism, this document is the fourth report on implementation of the APRM National Programme of Action presented by the country.

To improve its reporting system, the Permanent Secretariat with the support of the Programme for strengthening political governance, financed by the United Nations Development Programme, has conducted a diagnostic study on current modalities for reporting on implementation of the National Programme of Action.

The results of the said study helped in improving the collection data for finalizing the report.

Hence, the 2012 report is solely devoted to the preparation of interim reports as prescribed by the methodologies of the Mechanism. It was prepared through the collection of data from the governance actors in the country. The said data were analysed and processed by the Permanent Secretariat.

The prepared report was discussed and validated at a workshop that brought together actors from the administration, the private sector and civil society organizations.

It is structured around the actions undertaken in 2012 in the main focus areas covered by APRM, namely democratic and political governance, economic governance, corporate governance and socio-economic development. The last section is devoted to cross-cutting issues. The annex of the document presents in a summary table, the progress made, the challenges and prospects as narrated in the document.

Finally, the conclusion presents prospects of improving the governance system on the whole.

1. DEMOCRACY AND POLITICAL GOVERNANCE

Codes and standards

Conflict prevention and resolution

Constitutional reforms

Effectiveness of the administration

Access to justice

Promotion and protection of economic, social and cultural rights

Customary leadership

Promotion of women's rights

Participation of the youth in political governance

Promoting the rights of vulnerable groups

Promoting social dialogue and participative governance

1.1. Codes and standards

1

Burkina Faso has ratified all the conventions and treaties prescribed by the basic documents of the Mechanism.

1.2. Conflict prevention and resolution

In 2012, Burkina Faso left no stone unturned to ensure the resolution and prevention of conflicts in the world and in Africa. Indeed, it participated in the inaugural meeting of the support Group set up to monitor the situation in Mali and the 9th working session of the International Contact Group on Guinea-Bissau (GIC-GB) held in Abidjan, Republic of Côte d'Ivoire, on 7 June 2012.

The mediation efforts of the President of Faso in the Republic of Mali resulted in the signing, in 2013 in Ouagadougou, of the preliminary agreement between the Malian Government, the Azawad National Liberation Movement and the High Council for the Unity of Azawad, which paved the way for the presidential elections in Mali.

This strong involvement of Burkina Faso was pursued with its participation in the inaugural meeting of the Support Group set up to monitor the situation in Mali and 9th working session of the International Contact Group on Guinea-Bissau (GIC-GB) held in Abidjan, on 7 June 2012.

Still concerned about sub-regional and regional peace and stability, Burkina Faso participated in the inter-ministerial meetings of experts from ECOWAS Member States on the regional strategy for combating terrorism in Africa.

Burkina Faso is also present in peace-keeping operations, notably in the following contexts:

- United Nation's Stabilization Mission in the Democratic Republic of Congo with thirty-two (32) persons;
- United Nations Stabilization Mission in Haiti with twenty-one (21) persons;
- United Nations missions in the Central African Republic and Chad, also with twenty-one (21) persons;
- United Nations and African mission in Darfur with two hundred and eighty-five (285) persons;
- United Nations operation in Côte d'Ivoire with three (3) persons;
- United Nations Office in Burundi with one (1) person;
- BINUB 1 person, MINUSMA 500 persons.
- Also, following the mutinies that shook the country in 2011, the National Armed Forces embarked on a reconstruction phase. They, therefore, adopted a Strategic reform plan (2012-2016) in line with the vision of the 2025 National Defence Prospective Study (EPDN), i.e. the establishment of:
- a "united, efficient army, in line with the ambitions and challenges of Burkina Faso and source of our national pride".

The year 2012 saw the implementation of major reforms aimed at improving governance within the National Armed Forces (FAN) to meet the nation's expectations. In a constraining sub-regional and national security context, many achievements have been registered in the area of military governance. They include notably structural reorganization, recruitment and training, improvement of professionalism and operational capacity, improvement of the living conditions of the staff, equipment, improvement of internal and external communication, intensification of the Army-Nation relationship. To that end, the following activities were carried out:

- restructuring of the National Armed Forces;
- takeover of staff by the command;
- review of the method of recruitment and initial training of recruits of the contingent, non-commissioned officers and active officers;
- development and implementation of a programme for enhancing military civic commitment and ethics;
- development and implementation of a retraining and upgrading programme on command requirements;
- drafting of texts on the creation, organization, attributions and functioning of frameworks for consultation within the FAN;
- upgrading the former military camps and pursuing the construction of new camps;
- relocation of some military units;
- acquisition of new equipment for the FAN;
- supplying uniforms to the entire military personnel;
- creation of an anti-terrorist group to protect the territory's northern border;
- deployment of troops in Guinea-Bissau, Mali and Darfur (Sudan) to meet our international commitments, notably in terms of our contribution to Peace-keeping Operations.

1.3. Constitutional reforms

At its plenary session of 11 June 2012, the National Assembly (NA) considered and adopted a bill on review of the Constitution to take into account the consensual proposals from the national Conferences on political reforms. A total of five (5) new articles were introduced and fifty-five (55) articles amended out of the one hundred and sixty (160) in the Basic Law to strengthen democracy in Burkina Faso. Customary leadership, republican values like transparency, integrity, probity, impartiality, accountability were integrated in the preamble.

The new constitutional provision had to do with the promotion of gender, creation of the Senate, the amnesty granted to Heads of State since 1960 and election of the President of the Constitutional Council by his peers.

Concerning the separation of powers, the cornerstone of a rule of law, the national Conference recommended the adoption of a semi-constitutional rule with a reduction of the powers of the executive, the increase of the powers of the Parliament and independence of the justice system.

The reduction of the powers of the executive is translated notably by the obligation of the Head of State to appoint a Prime Minister from the parliamentary majority, an appointment which until then was based on the discretionary powers of the President of Faso.

This also facilitates the implementation of mechanisms to ensure accountability of the Prime Minister to Parliament. It is a constitutional provision which aims at making the Prime Minister accountable for government action before Parliament (Article 63 of the Constitution).

The National Assembly, after the planned reforms, should observe a strengthening of its powers. Henceforth, the Assembly will approve the Prime Minister's Policy Statement by vote since the new reforms allow for the principle of control of its agenda by Parliament in accordance with Article 118 of the new Constitution. Unlike the former provision which included the agenda in the priority set by Government. With the review, this aspect merely expunged in order to leave the deliberative autonomy with the parliamentarians.

This provision strengthens the powers of Parliament, which now has control over its agenda, adopts its development programmes and plans and expresses prior opinion for appointment to high state positions. As for the Constitutional Council, it now elects from its ranks its president and may be referred to by $1/10^{\text{th}}$ of the elected officials of a Chamber, the Senate or the National Assembly.

1.4. Effectiveness of the administration

The Ministry of Public Service, Labour and Social Security (MFPTSS) has adopted a public policy, namely the Ten-year Strategic Plan for Modernization of the Administration (PSDMA) over the period 2011-2020. It aims at making Burkina Faso, "a rule of law, which has a modern, efficient development-oriented administration in the service of the general interest, the citizen and the user». Its adoption confirms the Government's desire to ensure that the administration and all development actors are at the service of the general interest, by enhancing accessibility, effectiveness and transparency in the functioning of public services.

To that end, the MFPTSS initiated in 2012 a process of successive reforms with a view to providing all citizens with a republican and efficient administration.

In terms of optimal management of public human resources, the Ministry of Public Service, Labour and Social Security in collaboration with the *Centre africain de management et de perfectionnement des cadres* (CAMPC) organized in April and October 2012 two (02) sessions of Top management. These are training seminars for newly-appointed officials to the Council of Ministers on leadership management.

Moreover, the Human Resource Management Conference (CGRH) was held in 2012. It serves as "a framework for assessing government policy in the area of administrative governance and public human resource management". The objective is to ensure forward and strategic planning of human resources in the Public Service. It continues to hold its annual meeting, by allying the exercise with the budget calendar, so that the results in terms of estimation

of government staff by employment, category, age, level of remuneration can be used for salary forecasting.

Concerning human governance, to have an exact assessment of state agents, the biometric census of public service workers was organized in 2012, on the entire national territory with the help of a private operator, GEMADEC. The operation was carried out in two phases.

The first was conducted from 28 May to 5 August 2012 and resulted in enlisting 113,819 agents paid from state budget.

The second phase took place from 3 to 15 December 2012 and resulted in the identification of 5,442 late agents paid from state budget.

The main objective of the project is to control the total number of public officials to ensure more efficient control of staff expenditure in the state budget. This operation should contribute to the respect of the WAEMU convergence criteria by Burkina Faso, notably the criteria aimed at devoting a maximum of 35% of tax revenues to salaries.

The provisional results of this operation were presented to the Council of Ministers on 24 October 2012. The latter approved the pursuit of the operation and gave instructions for its perpetuation.

Also, **to** facilitate access to public services, the MFPTSS published a directory and address management of public structures. The directory helps to bring the administration closer to the citizens, as well as facilitating access of users to public structures. It is also presented in the form of a telephone directory of state administrative structures.

In the area of promotion of electronic administration and improvement of the public service, the objective is to enhance transparency and improve the quality of public service, using ICTs to improve accessibility and quality of public services. It was with this in mind that the On-line Access to Administrative and Salary Information System (ALIAS) and the Online Access to Digital Archive Personal Files (DIAN) of public officials were launched. After ALIAS and DIAN, another system was introduced in 2012; it is the PREVUS system, an interactive online communication system of the *Caisse autonome de retraite des fonctionnaires* (CARFO). The PREVUS was launched on 8 May 2012 by the Minister of Public Service, Labour and Social Security.

This innovation is part of the reform of the administration. Indeed, PREVUS is a set of online information services for the benefit of users, notably CARFO insured persons and pensioners. With its three functionalities (monitoring of the status of a retirement file, followed by contributions and possibility of estimating the amount of pension), it saves time by limiting travels.

This also applies to PREVUS, which is an online tool for monitoring files of retired civil servants.

The online salary and information access system (ALIAS) is a platform that enables state agents to consult online, using a code, their personal files, their last pay slips and monitor their acts as they are processed. One of the advantages of this tool is that it enhances transparency in the processing of files and accessibility of the administration.

The DIAN system, among other things, aims at dematerializing personal files (PF); constituting a digital sustainable and secure data base of PFs; offering officials the possibility of keeping their files on an external data carrier in order to protect them against natural disasters and physical deterioration.

Improvement of the organization of competitive examinations for recruiting new public officials was pursued in 2012. The system of recruitment improved with the modernization of the competitive examination process, particularly with pursuit of the deconcentration of the examinations, improvement of the process of communication, publication of the results and intensification of the fight against fraud.

Regarding the organization of the 2012 professional competitive examinations, all the 156 authorized examinations were opened. However, 2,346 positions were filled out of a total of 2,557 vacant posts. The remaining 211 vacancies are due to the poor results obtained by the candidates and by the lack of candidatures in certain options. For the 2012 direct examinations, out of a total of 121 authorized, 55 examinations were opened. This readjustment was aimed at reducing the number of competitive examinations, while maintaining the number of posts to be filled. The objective of this reorganization is to control organizational expenses and the search for efficiency of the recruitment and professional training processes. Hence, 8,370 posts were filled out of the 8,544 vacancies, for a total of 411,374 candidatures. This process enables the administration to have a framework that appropriately meets the demands of citizens.

Concerning the deconcentration of the Ecole nationale d'administration et de magistrature (ENAM), the dynamics of deconcentrating its training networks in order to ensure proximity training under the best conditions was pursued. After the Regional Institutes of Administration (IRA) of the Hauts Bassins and Fada N'Gourma, the Ouahigouya and Ziniaré IRAs were opened in 2012.

Despite the reforms initiated by the Government, the Burkinabe public administration is facing structural and functional problems that are having a negative impact on its efficiency. The dysfunctions may be perceived at the organizational, operational and behavioural levels.

At the organizational level, the low concentration of the administrative structures and their instability, following the institutional changes, which are at times translated by mergers/takeovers, breakups and abolitions of ministries or institutions inhibit the efforts and achievements already made.

At the operational level, extensive bureaucracy, low incentive working conditions, inadequate office accommodation in the services, laxity, petty corruption, rudimentary working conditions, lack of support measures have impact negatively on the motivation and output of officials.

At the behavioural level, the quasi-permanent presence of intermediary agents between the administration and the citizens, the discourteous behaviour of certain agents vis-à-vis the citizens, the refusal of some citizens to respect the laws, regulations and procedures persist and have an impact on the quality of services in the public administration.

1.4. Access to justice

Many reforms were undertaken in 2012 aimed at strengthening the judiciary. These reforms are based on the strategic orientations of the National Justice Policy (PNJ) adopted in 2010 with the objective of establishing a "credible, equitable, independent, transparent, deconcentrated, competent justice system that is accessible to all". This policy is operationalized through triennial sectoral plans of action. And to facilitate the implementation of these actions, the Government made huge investments in the justice sector, amounting to eight billion four hundred and forty-four million two hundred and thirty-seven thousand one hundred and thirty-nine (8,444,237,139) CFA francs.

Activities carried out in 2012 included notably completion of the construction of the Ouagadougou maximum security prison and commissioning the *Maisons d'arrêt et de correction* (MAC) of Yako and Ziniaré.

Besides, the Government's desire to humanize the prisons and improve the quality of life of prison inmates was translated by the construction of small infrastructural facilities in the *Maisons d'arrêt et de correction* (mills, kitchens, boreholes and water towers, infirmaries, quarters for women and minors, etc.), and refurbishing of certain jurisdictions and prisons.

On 1st January 2012, six hundred and twenty-four (624) prisoners benefited from a presidential pardon (including 447 commutations of sentences, 177 remaining sentences). This helped in easing congestion in prison establishments by reducing over-population by about 20%.

As part of the judiciary reforms, several bills were considered. They include the acts on organization of the profession of judicial officer, the status of notaries and institution of a national torture prevention mechanism. The year 2012 was also marked by an increase in human resources though an increase of the judiciary staff with the arrival of new staff mainly composed of magistrates, registrars and warders. However, the magistrate/inhabitant ratio, which is 2.5 magistrates to 100,000 inhabitants in Burkina Faso is far from the standard, which is one (1) magistrate to 10,000 inhabitants.

The organization of open days in the jurisdictions contributed to the enhancement of the psychological accessibility by providing the population with more information on the functioning of the judicial machinery, thus creating confidence in the justice system. Also, the specialization of the jurisdictions resulted in the construction of the Ouagadougou and Bobo-Dioulasso commercial courts. Likewise, the entry into force of two revised uniform acts, namely the uniform act on general commercial law and organization of securities helped in improving the business climate in Burkina-Faso. Despite these efforts, the general perception is that the independence and credibility of the justice system are put to the test by interference from the political authorities. So, the absence of a qualified interpreter in the courts, the difficult execution of court decisions, the prison system that does not meet international norms and standards, and the poor protection of the rights on inmates, the slow pace of treating some cases have revealed the weakness of the authority of the judicial machinery.

1.5. Promoting and protecting economic, social and cultural rights

Various activities were carried out as part of the promotion and protection of economic, social and cultural rights. Concerning enhancement of the effectiveness of human rights, the main actions consisted in: visiting prisons to have discussions with the officials and draw their attention to the need to improve prison conditions and even humanize the prisons; organizing forum-plays on forced and/or early marriage in the North and the Sahel. About 2,680 people were sensitized. Three (3) conferences on "*civic spirit and regulation on street demonstrations*" were also organized during the year 2012.

Burkina Faso commemorated the African and Peoples Rights Day on 21 October 2012 by organizing three (3) conferences on the African Human and Peoples Rights (CADHP) at Koudougou, Ouagadougou and Kaya on 23 October 2012.

Concerning the strengthening of the human rights legal framework, the bill on repression of torture and other sentences and inhuman or degrading cruel treatment was developed and validated by the *Comité technique de vérification des avant-projets de loi* (COTEVAL).

In the area of national, regional and international cooperation, the main achievements were the preparation and validation of the state report for the passage of Burkina Faso to the second cycle of the Universal Periodic Review (UPR).

Burkina Faso also participated in two (02) sessions of the CADHP, in three (3) sessions of the Human Rights Council in Geneva, Switzerland; in the 11th session of the General Assembly of State-parties of the International Criminal Court (ICC) from 14 to 22 November 2012 and in the session of the United Nations General Assembly.

It should also be noted that in terms of leisure and sports, Burkina Faso had made enormous efforts through the national policy laws on sports and leisure. Furthermore, through its participation in nearly all international meetings, Burkina Faso distinguished itself by participating brilliantly in the 2013 African Cup of Nations, coming out as vice-champion of the competition.

1.7. Customary leadership

It has been enshrined in the Constitution and the Government has requested traditional chiefs to make a proposal on the adoption of a law on customary leadership. In 2012, reflection and consultation activities were organized with traditional leaders. They included two (2) training seminars on peace and tolerance on 10 and 11 August 2012 in Bobo-Dioulasso and 13 and 14 September 2012 in Ouagadougou for seventy (70) people. The beneficiaries

were traditional and religious authorities and representatives of CSOs, representatives of youth organizations as well public service officials.

1.8. Promoting women's rights

The key activity in this area was the holding in Ouagadougou in September 2012 of the national women's forum, which reaffirmed the need to empower women, through training, to promote female entrepreneurship, create jobs, and facilitate access of women to technologies. To meet these challenges, there is a need to combine the efforts of the State and its partners to mobilize CFAF 25 billion by 2013.

However, considerable challenges remain to be met as stressed by the Minister for Promotion of Women and Gender in these terms: "We should now act in the field, know on which sector to focus, ensure economic empowerment of women, their access to credit and public services, support them technologically, strive to train those who have been elected so that they can defend women's rights and qualitatively represent women".

Indeed, Law 010-2009 AN of 16 April 2009 on fixing of quotas was tested in the combined elections of 2 December 2012 and did not produce the expected results. The law, which should contribute to increase the number of women in decision-making bodies through elections did not benefit from the necessary technical, financial and material support.

With the application of the law on quotas, the number of women at the National Assembly has increased to twenty-four (24) out of 127 MPs. There are also twenty-one (21) (women) mayors out of 351, representing a rate of 5.68% and 3,896 Councillors out of 17,800, or a rate of 21.89% 35.80%.

1.9. Participation of the youth in governance

Concerning intensification of the participation and representativeness of young people in decision-making bodies, two representatives from youth associations were elected to sit on the Economic and Social Council (ESC).

The youth is also involved in the drafting of texts on conditions of partnership and grants from youth, taking into account their needs and aspirations.

In terms of implementation of priority Area 4 of the National Youth Policy, namely ensuring greater participation of the youth in national development, the following achievements may be mentioned.

Concerning improvement of frameworks for consultation and dialogue with the youth, 13 regional workshops for consultation and exchange with the youth were organized to determine their expectations and needs with a view to formulating youth social promotion programmes. Also, a meeting for reflection and consultations with the youth on the creation of a framework for consultation between the MJFPE and youth organizations was held in September 2012. Thus, four levels of dialogue and consultation have been defined by the youth, namely the national level under the chairmanship of the Minister in charge of the youth, the regional level under the responsibility of governors and chairpersons of the Regional Councils, the provincial level chaired by the mayors of municipalities. The youth also participated in the forum of constituted bodies with the Head of State, held on 6 November 2012, and the celebration of the International Youth Day (IYD) in Koudougou and the 13 regions of Burkina Faso in August 2012.

In terms of promotion of infrastructure and youth associations, the following activities were carried out in 2012:

- Pursuit of the construction of Listening and Dialogue Centres for the Youth in the Sahel, *Boucle du Mouhoun*, Centre-West and South-West regions, bringing the number to 11;
- Training of 100 youth organizers in the techniques of organization and

conduct of youth socio-educational activities and in administration, management, and techniques for promoting listening and dialogue centres for the youth;

- Finally, validation of the results of a study on the needs and aspirations of the youth conducted by the MJFPE, in collaboration with UNICEF.

1.10. Promoting the rights of vulnerable groups

At this level, efforts were made to promote the rights of disabled persons, the elderly and victims of disasters and humanitarian crises.

• Protecting and promoting the rights of disabled persons:

Improving the mobility, welfare and promoting the empowerment of disabled persons constitute one of the priorities of the State. To that end, the Government continued to provide support to structures in charge of people with disabilities this semester. Ultimately, it aims at providing these structures with financial resources for acquiring specific materials for their residents.

Moreover, ad hoc support was provided to 25 people with disabilities. It was constituted by seventeen (17) simple tricycles, two (2) wheelchairs, one walker and five (5) orthopaedic appliances.

Besides, to promote sporting activities for people with disabilities, a grant of CFAF 18,000,000 was given to sporting federations, including the *Fédération burkinabè de sport pour handicapés* (FBSPH). Similarly, a grant of CFAF 7,000,000 was made to the FBSPH, which facilitated the participation of disabled sports men and women in the Para Olympic Games held in London (England) during the first semester of 2013.

• Protecting the rights of the elderly

Following the 1st Forum of the Elderly, held on 22 and 23 October 2012 in Ouagadougou, a cabinet meeting was held on 4 March 2013 to discuss the conclusions and recommendations of the said forum. The meeting recommended a multi-sectoral approach and gave directives to all concerned ministerial departments to include the said recommendations in their sectoral agendas. It also expressed the need to establish a link between the national social protection policy and concerns of the elderly.

Social exclusion of persons accused of witchcraft, who are often elderly people is a denial of their fundamental human rights, with undesirable consequences both on socio-economic development and from the point of view of the world's perception of Burkina Faso in terms of protection of human rights. To encourage people to abandon social exclusion of people accused of witchcraft, a Social Dialogue Day was organized. It brought together traditional chiefs from Passoré province, civil society actors and the government at the palace of His Majesty the Naba Sigri of Yako. This activity offered the Government the opportunity to launch an appeal for greater involvement of traditional chiefs in the fight against social exclusion.

Furthermore, to enhance the protection of the elderly, the *Direction générale de la solidarité nationale* provided technical and material support to contact groups for seniors, constituted by communicators, for the organization of an activity entitled "Seventy-two (72) hours of grandparents" in Ouagadougou.

• Caring for victims of disasters and humanitarian crises

With regard to management of disasters and humanitarian crises, the 6th of session of the *Conseil national de secours d'urgence et de réhabilitation* (CONASUR) was held on 21 February 2013. The general objective of this session was to discuss the status of implementation of the recommendations of the 5th session, take stock of the management of disasters during the year 2012 in Burkina Faso and adopt the 2013 programme of activities. The recommendations made during the 5th session were:

- the insertion of a budget line for the construction of a headquarters for CONASUR in the 2013 priority investment programme by the Ministry of Economy and Finance;

 capitalization of the plans of action and activity reports of all the actors involved in the prevention and management of disasters and humanitarian crises;

- strengthening the capacities of the staff and branches of CONASUR in data processing;
- providing CORESUR with the necessary resources to enable it to operate effectively.

The report on status of these recommendations shows that the recommendation relating to the strengthening of the capacities of staff and branches of CONASUR in data processing is being implemented while the others are yet to be implemented.

This 6th session brought together 170 people drawn from the public administration and civil society organizations as well as the technical and financial partners.

The PS/CONASUR also organized one (1) workshop with the sector leaders of the national multi-risk plan for preparation and response to disasters. The discussions focussed on the conclusions of the 6th session of CONASUR.

Furthermore, in the concern to strengthen the capacities of members of the CORESURs and COPROSURs, two (2) training sessions were organized for 30 members of CORESUR Plateau Central and 40 members of COPROSUR Bazèga on the prevention and management of disasters and humanitarian crises.

Finally, one (1) training session on disaster prevention and management was organized for 30 leaders of child and youth movements in the province of Sanmatenga.

The different consultations and training sessions helped in strengthening the capacities of the actors on reduction of risks from natural disasters, protection of children and young people in emergency situation as well as on prevention and management of disasters and humanitarian crises.

Besides, CONASUR offered assistance to 19,865 victims of natural disasters. They included 184 victims of damage caused by animals in the *hauts-bassins* region (Kénédougou, Tuy), 3,681 victims of floods and strong winds that affected six (6) regions. In the *Centre Est* region, 2,000 vulnerable households or 16,000 people affected by food insecurity received assistance.

Furthermore, 53,182 victims of humanitarian crises were also offered assistance. They included 49,957 Malian refugees, 2,063 victims of intercommunity conflicts in the *Centre Sud* (Nahouri), *Centre Est* (Boulgou, Koulpelgo) and *Centre Nord* (Namentenga) regions, 156 returnees from Libya and Ghana and 1,006 victims of fire outbreaks in six (6) regions (*Centre Sud*, *Boucle du Mouhoun, Plateau central, Centre Est, Centre Nord, Nord*). The assistance provided to victims of humanitarian crises amounted to CFAF 104,964,059.

• Child protection

The efforts of the Government and its partners in the area of child protection, in line with its international commitments are highlighted in the reports on implementation of the optional protocols of the Convention of the Rights of the Child (CRC) and the African Charter on the Rights and Welfare of the Child (ACRWC). These reports were presented respectively on 21 January in Geneva and 16 April 2013 in Addis-Ababa.

Similarly, module on child labour has been developed with a view to integrating it into the training curricula of labour inspectors and controllers.

Furthermore, with regard to the fight against child labour, the study on "Analysis of the institutional capacities and capacity building strategies within the context of the implementation of the National Plan of Action on the Worst Forms of Child Labour (NPOA/WFCL)" has been validated. The validation followed the holding of the preparatory meeting on the text on establishment of the National Coordination Committee of the NPOA/WFCL (NCC-NPOA/WFCL). To ensure greater focus of the fight against child labour and its worst forms in communal development plans, a sensitization tour for mayors of Houet, a training course for municipal councillors from the *cascades* and advocacy activities were organized.

Hence, 855 sensitization sessions (radio programmes, forum theatres, lecture forums, film debates) were organized for the population on WFCL, as well as 382 follow-up visits to victims of child trafficking placed in training

workshops and/or returned to their families. Also, thirteen (13) victims of child trafficking were intercepted and returned to their families, while fifteen (15) cases of kidnapping and forced marriage were resolved.

With regard to caring for children without families, seventy-six (76) children were placed in foster families or an institution. In addition, 156 other children were received, offered accommodation and care at the Ouagadougou Children's Home.

The offer of care to children without families was pursued with the supply of milk to 14 children, to the tune of eight hundred and seventy thousand nine hundred and seventy (870,970) CFA francs and offer of financial support of nearly four million (4,000,000) CFA francs to six (06) *Centre d'Accueil pour les Enfants en Détresse* (CAED) and four (4) foster families.

With regard to the promotion of the rights of children, 875 sensitization sessions (discussions, film debates, forum theatres, radio programmes, etc.) were organized for more than 52,000 people, including 33,781 women and 18,219 men. Similarly, 54 members of parent-teacher associations and peer educators, and 111 municipal councillors were trained on child rights. Besides, civil status papers were established for 2,000 children.

As part of the commemoration of the Month of the Mother and Child, the Day of the African Child was organized in Koudougou on 16 June on the theme: "Abolishing corporal punishment of children: our collective responsibility". Several activities (conferences, advocacy, inauguration of the square dedicated to the child and laying the cornerstone of the monument of the child, sports...) aimed at promoting the rights of the child were carried out on this occasion.

1.11. Promoting social dialogue and participative governance

In the context of the promotion of social dialogue, several forums were organized in 2012. In addition to existing frameworks (the meetings between the Government and private sector, between the Government and trade unions, the national women's forum, the national youth forum) the framework meetings were held. They include the national forums of constituted bodies, one on the elderly and one on secularity.

The objectives of the forum on secularity were:

- to identify and analyse favourable practices and practices which can ultimately pose a threat to public peace and affect rights and liberties in a secular State;
- to propose recommendations that can preserve secularity as a factor of peace and strengthening of social cohesion in Burkina Faso;
- to propose measures for implementing and monitoring the recommendations of the Forum.

The participants made recommendations that can preserve secularity as a factor of peace and social cohesion in our country.

The National Elderly Forum, held from 22 to 23 October 2012 enabled participants exchange views on the specific problems of the elderly and capitalize their contributions in the development of Burkina Faso. At the end of the deliberations, some recommendations were made, notably on the development of a national strategy for the protection and promotion of the elderly, support for implementation of the new national health programme for the elderly, adoption of a preferential public transport tariff policy to facilitate the movement of the elderly and retirees.

The National Forum of Constituted Bodies was held on 6 November 2012. The objective was to reflect on the specific expectations of each segment of the nation and discuss issues of common interest, in line with the Government's ambition to improve performance, accelerate the emergence and enhance the international outreach of Burkina Faso.

The conclusion of the sectoral collective agreements also contributed to create favourable conditions for healthy and profitable working relations. The same applies to the annual meetings between the Government and the Unions, held on 18 December 2012 and between the Government and the Private Sector, held on 30 July 2012. They constitute effective consultation frameworks for creating the conditions for developing the private sector and

promoting workers' rights.

The world of work has also acquired new instruments for stabilizing some sectors of activity and creating a serene social climate in the companies concerned. Indeed, new sectoral agreements have been signed in the micro-finance and road transport sectors. Two (02) other agreements are being negotiated under the impetus of the labour administration.

Finally, the control, consultation, mediation and regulatory bodies, notably the *Autorité supérieure de contrôle d'Etat* (ASCE), the Audit Office, the *Conseil supérieur de la communication* (CSC), the *Médiateur du Faso* produced and transmitted their 2012 Activity Reports to the Head of State. These different institutions made recommendations aimed at correcting the dysfunctions observed.

2. ECONOMIC GOVERNANCE

Transparency and effectiveness

Information on the expenditure chain

Combating money laundering

Sub-regional Integration

Promoting economic growth and sustainable development

Economic growth and redistribution of the fruits of growth

Poverty reduction

2.1. Transparency and effectiveness

During the first quarter of 2012, the technical secretariat of the steering committee of the programme-budget of the State (ST/CPBPE) pursued the communication/sensitization actions on the budget programme. In total, 1,252 participants, mainly members of the CASEM of ministries, were concerned by these actions.

Furthermore, the documents produced on the programme budget were largely distributed in the ministries, institutions and partner structures of the ST/CPBPE.

The DT/CPBPE also recruited a firm for the operationalization of the communication strategy on the programme budget.

2.2. Information on the expenditure chain

With the support of the American Public Treasury, the Ministry of Economy and Finance received technical assistance for the design of a model for forecasting budget revenue. It is called the "Revenue Forecasting Model" (MPR).

The said model is available and operational. It is used for preparing budget estimates as part of the development of the Medium-term Expenditure Framework. This scientific model makes projections of annual revenues by heading, based on previous actual expenditures. The results of projections by this model are based on the performance of each by nature and by income.

2.3. Combating money laundering

The fight against money laundering was based on improvement of the legislative arrangement, which had a lot of shortcomings. To that end, Decree 2012-1136/PRES/PM/MEF of 31 December 2012 on designation of the competent authority in charge of administrative freezing in application of the law against terrorism financing was adopted, as well as two orders. One concerned the attributions, organization, and functioning of CENTIF and the other attributions of the competent authority for administrative freezing in application.

CENTIF prepared its 2012 quarterly and annual activity reports.

These reports were presented to the competent authorities, namely BCEAO and the Ministry of Economy and Finance.

Finally, CENTIF signed 11 cooperation agreements with its counterparts in Belgium, France, Nigeria, Ghana, Morocco, Monaco, Cape Verde, Mauritius, Algeria and Chad.

2.4. Sub-regional integration

In the year 2012, Burkina Faso undertook actions aimed at accelerating sub-regional integration. Thus the country adopted a strategy for developing the transport sector which takes into account Community requirements. In the same vein, it initiated a technical study on the sub-regional motorway project. Studies for the construction of the motorway between Yamoussoukro in the Republic of Côte d'Ivoire and Ouagadougou are ongoing.

In terms of management of international economic and financial relations, Burkina Faso formulated the national component of development programmes of the West African Economic and Monetary Union (WAEMU), with the inclusion of 7 development projects of Burkina Faso in the second phase of the Regional Economic Programme (REP), and those of the Economic Community of West African States (ECOWAS), by updating the national study Community Development Programme (CDP).

All the efforts made by Burkina Faso to apply the community standards was commended through the designation of the President of Faso by his peers during the ECOWAS Conference of Heads of State and Government to propose a memorandum on the issue of free movement of people and goods.

It should be noted that Burkina Faso is up-to-date with its financial contributions to sub-regional integration institutions, namely ECOWAS and WAEMU.

2.6. Promoting economic growth and sustainable development

The country pursued the promotion of economic growth and sustainable development in 2012 with the implementation of the Accelerated Growth and Sustainable Development Strategy (AGSDS) as the current reference document of the economic and social development of Burkina Faso. It should be recalled that the main objective of the AGSDS is the consolidation of the bases of the economy through the strengthening of its potential to achieve accelerated growth that can create jobs, increase revenues and consolidate the bases of a sustainable development.

The implementation of activities for promoting economic growth enabled the country to achieve a GDP growth of 9.0% in 2012, as against 5.0% in 2011, mainly through the primary and tertiary sectors with respective contributions of 4.7 and 3 points to GDP growth.

However, the mining sector, with gold as the main product, occupies a preponderant position in the national economy, as it contributed 7% to the formation of GDP in 2012, in real terms. The year 2012 registered an increase in mining revenue, attributable to the increase in the price of gold and an upward trend of gold production, which stood at 42.4 tons as against 38 tons in 2011. In terms of revenue for the state budget, revenue from gold mining increased from 1.2% of total revenue in 2007 to 21% in 2012. Gold has become the primary export product since 2009, representing 71% of the

country's export earnings in 2012.

In order to transform this clear spell of mining into a portfolio of other physical, human and financial assets for promoting sustainable development, the Government embarked upon the establishment of growth poles around mining areas.

To accompany these efforts by the Government and in the concern to respect their contractual obligations, and their societal responsibility, mining companies constructed socio-economic infrastructure comprising: schools, literacy elimination centres, an equipped laboratory at the University of Ouagadougou, dispensaries, houses, roads, boreholes, markets, slaughter houses, modern shops, grain banks and worship places. They have also provided specific support to productive activities of women, training of the youth (mechanics, carpentry, welding, kindergartens, etc.), to acquisition of ambulances, and in the area of sports.

Moreover, under environmental governance and promotion of sustainable development, sustainable development criteria and indicators were developed and validated as well as a guide on integration of the environment and poverty-environment relationships in public policies, notably sector policies were developed and validated.

2.5. Economic growth and redistribution of the fruits of growth

The SCADD aims at promoting pro-poor growth, by including in the priority sectors, the agricultural sector (agriculture, cattle breeding, fisheries, forestry), the mining sector, the cottage industry, cultural and tourism industries, and the development of SMEs/SMIs in the processing of local products.

Growth reduces poverty when public policies initiated create jobs that offer a source of sustainable income for working people. In that regard, in 2012, the implementation of the Special programme for creating jobs for young people and women (PSCE/JF) helped in training 7,015 young people and create an estimated 27,493 direct jobs and 31,218 indirect jobs, of which 18,362 are

occupied by young people. This programme also serves as a channel through which the fruits of growth are transmitted to the most vulnerable population groups.

The activity of mining companies facilitated the creation of 5,517 jobs including 3,795 jobs for nationals. The development of gold mining activities also benefited some sectors of activity through sub-contracting. They include BTP, supply of petroleum and chemical products, maintenance, security, environmental studies. Sectors that benefitted from the development of mining in our country were hotel management, catering, transport, transit, banking, insurance, legal, fiscal and accounting consultancy.

Similarly, the Bagre growth pole project and the Samendeni Valley Integrated Development Programme (PDIS) constitute important initiatives in the promotion of private commercial activities, job creation and poverty reduction, notably by improving food security.

Indeed, actions for promoting poles of growth were intensified in 2012, with the effective restructuring of the *Maîtrise d'ouvrage de Bagré* (MOB). Decree 2012-1009/PRES/PM/MEF of 20 December 2012 creating the semi-public company) called "*Société de développement intégré du pôle de Bagré*", in short "BAGREPOLE", indeed completed this restructuring, after it was constituted on 28 June 2012. It was preceded by the adoption in, September 2012, of a master plan for developing the public utility zone, the creation of the bodies of the semi-public company and adoption by the Board of Directors, in November 2012, of the 2013-2017 Strategic development plan. The institutional capacities of the Government and the MOB were thus strengthened in the provision of services to the private sector and improvement of investment climate in the Bagre project zone.

Furthermore, to establish the PDIS, an investment of 17 billion was set aside for the year 2012. Ultimately, the first phase of the PDIS, estimated at a cost of CFAF 78,325 billion, will involve the construction of a dam with a capacity of one billion cubic metres of water, irrigated areas and equipment of a hydro-electric power plant and social investments. The ultimate goal is to enable rural populations to undertake income-generating activities. To ensure equity in the distribution of the fruits of growth, the Government has also doubled the efforts to improve the living conditions of the populations by devoting 27.6% of the national budget to the funding of social sectors like health and education. This has made it possible to offer free primary education (free school supplies, school fees and school feeding), ensure availability of first aid kits for complete treatment of malaria among under-five children (178,242 kits) and pregnant women (38,742 kits), purchase and distribute insecticide-treated bed nets on the entire national territory.

Efforts were also deployed, through the different development projects and programmes aimed at enhancing the welfare of the populations (social housing, salary increment, equipment of farmers, subsidies for products of wide consumption, etc.) and development of infrastructure to support production.

2.6. Poverty reduction

The results of the 2009/2010 general survey on the living conditions of households showed a decline in the incidence of poverty from 46.4% in 2003 (for a threshold of CFAF 82,672 per adult per year) to 43.9% in 2009/2010 (with a poverty threshold estimated at CFAF 108,454).

In order to significantly reduce poverty in the country, the Government has adopted the SCADD. This strategic policy document aims at achieving a strong, sustained and quality economic growth, with multiplying effect on the level of improvement of incomes, the quality of life of the population with due respect for the principle of sustainable development.

In that regard, in 2012, the estimations of social expenditures represented 7.5 % of GDP. The Government has intensified the poverty reduction measures through important pro-poor programmes such as the school feeding system, financial support for the elderly, the money transfer system for the two main towns and food security programmes. In the framework of the Accelerated Growth and Sustainable Development Strategy (AGSDS), the Government has increased the expenditures devoted to agricultural

development, which plays a key role in poverty reduction. In fact, investments in infrastructure (roads, irrigation) and measures aimed at improving access to high productivity inputs (improved seeds, subsidized fertilizer) have been made with a view to boosting food and cotton production and enhancing the resistance to climatic shocks, while eliminating food deficits.

In the same dynamic, interventions have been implemented aimed at increasing the incomes of rural populations and promoting agricultural economy. They include: (i) the training of 1,248 actors, including 274 women, in agricultural entrepreneurship, (ii) organization of 37 trade fairs and exhibitions, (iii) construction of 12 food processing factories for farmers, and (iv) the construction of 12 conservation facilities out of the 84 planned, (v) the programme for promoting improved traditional poultry farming for the youth and women.

Social expenditures on poverty reduction are defined as expenditures on sectors implementing priority programmes identified in the AGSDS to accelerate the achievement of the poverty reduction objectives. As at 30 June 2012, these expenditures amounted to CFAF 170 billion. They cover all the budget headings for the following ministries: Basic Education; Health; Social Action and National Solidarity; Promotion of Women; Public Service, Labour and Social Security (only the labour and social security components); Youth, Vocational Training and Employment; Agriculture and Hydraulics; Animal Resources; Environment and Sustainable Development. They also cover rural earth roads and infrastructure, Communication; Mining, quarries and energy; Justice and the Ministry of Economy and Finance.

The measures taken in the agricultural sector to fight against the rise in food prices in 2012 concerned: subsidies for fertilizers, supply of equipment and improved seeds to farmers, temporary exemptions from custom duties and the Value Added Tax (TVA) on essential commodities, sale of food products at social prices, suspension of the fuel price automatic adjustment mechanism.

The actions taken in the area of food and nutritional security were focused on the implementation of the *Plan opérationnel de soutien aux populations* *vulnérables* (POSPV), adopted to deal with the food crisis that followed the grain shortage of 154,000 tons during the 2011-2012 season. They were mainly in the form of an operation involving the distribution of 105,000 tons of food to 400,000 households, representing 2.6 million people. The crisis situation required the full use of the Intervention Stock (IS) and the National Security Stock (SNS) to supply food to more than 200 towns. Given the inadequate stocks, the State released CFAF 14.3 billion to purchase additional food.

In the educational sector, the actions concerned the offer of free basic education, subsidizing the school feeding system, construction of educational infrastructure.

With regard to health, the actions consisted in the supply of emergency kits for treating severe malaria cases in under-five children and pregnant women; treatment of people suffering from AIDS; subsidizing child delivery and Emergency Obstetrical and Neonatal Care (EONC), construction and equipment of health infrastructure.

Besides, in the area of social protection, the following actions were undertaken: (i) offer of financial support to the elderly; (ii) improvement of access to potable water and sanitation; (iii) construction of social and economic housing units; (iv) free distribution of food items; (v) management of disasters such as floods and drought; (vi) offer of financial assistance to orphans and other vulnerable children; and (vii) operationalization of a legal assistance fund to financially cater for needy persons before the courts.

Still in the concern to fight against poverty, as part of the implementation of programmes to reduce gender inequalities, the actions taken were aimed at creating a favourable political and socio-cultural environment to ensure full participation of women and men in the social economic and political life of Burkina Faso. To that end, the emphasis was placed on the integration of women's concerns in policies, action plans, sector strategies, regional and communal development plans. Moreover, the development of multi-functional development platforms for women, especially in rural areas was pursued.

3.1. Legal environment

The orientation for creating an appropriate legal and institutional environment for business was materialized by the conduct of a study on the complete inventory of business licences, with a view to reducing administrative burdens for their obtention, streamlining the obtention procedure and reducing the number of licences required for undertaking certain commercial activities. Similarly, to facilitate the creation of businesses, the issue of land titles and building permits, a financing memorandum was signed on 29 June 2012, for the implementation of a proposed inter-connection between the following structures: *Centre de formalité des entreprises* (CEFORE), *Centre de facilitation des actes de construire* (CEFAC), *Guichet unique du foncier* (GUF) and their partners in the public administration, at a cost of CFAF 2,200,000,000, 30% of which will be financed by the national budget.

To improve access of SMEs/SMIs to funding, a study was conducted on funding the economy. It led to the following proposals: (i) the creation of an interest relief fund at the Burkinabe Economic and Social Development Fund (FBDES); (ii) strengthening the financial capacity of the *Société de financement et de garantie interbancaire* (SOFIGIB); (iii) establishment of fixed-capital companies; (iv) promotion of inter-relationships between actors of the financial sector financier; (v) promotion of a long-term saving policy; and (vi) the need to conduct a reflection on tax incentives for financial institutions prepared to operate in rural areas or according to government priorities.

Furthermore, a study on the proposed creation of a *Caisse des dépôts et consignation* (CDC) in Burkina Faso is being finalized. The purpose of establishing the CDC is to mobilize and consolidate public and private savings for funding development projects at both the national and territorial community levels.

To promote healthy and fair competition and ensure the competitiveness of SMEs/SMIs, quality and metrology controls were carried out in 2012 on: (i) 3995 regulatory measuring instruments used by different socio-professional categories; (ii) 162 non-regulatory instruments, which were calibrated or verified at the request of companies and laboratories; (iii) 1,899 requests for analysis that were received and treated; (iv) the issue of 716 National Certificates of Conformity (CNC); (v) reception and instruction of 18 complaints; and (vi) regular monitoring of the market.

Concerning the issue of documents and authorizations for trade and investment, a total of 50,471 documents were issued in 2012. The predominant documents were still prior importation declarations, which represent 80.22%, followed by professional trader cards and certificates of origin, respectively 11.03% and 6.03%. Inversely, there has been a significant decline of special export authorizations and compliances with the investment code, which will be corrected with the implementation of the national export promotion strategy.

The Agence burkinabè de normalisation, de la métrologie et de la qualité (ABNORM) was created by Decree 2012-812/PRES/PM/MICA of 8 October 2012, the decree on approval of its special statutes having been adopted by Cabinet on 26 September 2012. The new structure aims at ensuring that Burkina Faso has a clear vision of quality assurance and contributing to

make national actors more competitive, by ensuring the quality of Burkinabe products and their compliance with the requirements of the market.

Finally, actions aimed at establishing one-stop window for mining were pursued and the draft decree is being adopted.

3.2. Support to the private sector

The Burkinabe Government is increasingly developing initiatives for the promotion of the private sector. Regarding improvement of the business climate, Burkina Faso has adopted important texts aimed at simplifying the administrative procedures for business set-up. It is pursuing its efforts through deconcentration of the *Centres de formalités des entreprises* (CEFORE) in the different regions. Ten (10) CEFORE and three (3) *Centres de facilitation des actes de construire* (CEFAC) have been created. These centres have helped to reduce considerably the delays, costs and number of procedures. Two (02) *Guichets uniques du foncier (GUF)* have also been created in Ouagadougou and Bobo-Dioulasso.

The Annual Government and Private Sector Meeting (RGSP) initiated by the Government have been held on regular basis for the past (11) years. The 12th was held on 20 July 2012 in Bobo-Dioulasso on the theme « Status of the (11) editions of the Annual Government-Private Sector Meeting ». The assessment over the (11) years of the RGSP shows the impact of these meetings on the private sector and makes recommendations. Globally, the Joint Technical Committee (JTC) commends the recommendations, which were aimed at combating fraud, clearing government debts to companies and conducting studies on reduction of electricity costs.

The creation of the *Conseil présidentiel pour l'investissement* (CPI) is in response to Burkina Faso's concern to put in place an investment policy framework that meets international norms and standards. Its third meeting held in May 2012 was aimed at attracting, reassuring and protecting investors and facilitating their establishment and their activities. The Government gives the assurance that it will pursue the improvement of the macro-economic growth environment by putting in place incentive legislative

and regulatory frameworks. To that end, a document has been developed to provide investment policy guidelines within a framework law in order to establish coherent and clear, harmonized, attractive routes-to-market to facilitate the decision to invest. The creation of the Investment Promotion Agency (API) in July 2012 will help in targeting, receiving and assisting investors.

Besides, the government has opted for Public-Private Partnerships (PPP). They are a credible alternative for constructing infrastructure and providing economic services that can boost sustainable growth and consequently the economic and social development of a country. According to UNDP, PPP describes the spectre of possible relationships to ensure delivery of public services in close collaboration.

The PPPs have the advantage of attracting direct foreign investors and, thereby, promoting the creation of new jobs, reducing government indebtedness and ensuring optimal allocation of resources. However, the non-adaptation of the legal, regulatory and fiscal framework, and lack of adequate specialized human resources and monitoring of contract may impede the implementation of PPPs.

In Burkina Faso, PPP projects exist. They include notably the construction of public warehouses for exporters, the railway company SITARAIL, the *Société de transport en commun de Ouagadougou* (SOTRACO).

To diversify the country's economy and promote PPP, the *Projet pôle de croissance de Bagré* (PPCB) also called "*Bagrépôle*" was launched in April 2012. Estimated to cost about sixty-seven (67,000,000,000) billion CFA francs, it is the most important agro-industrial project ever established by Burkina Faso. It is funded with a World Bank grant of one hundred and fifteen million (115,000,000) US dollars.

Information and sensitization workshops on the PPCB were organized in all the regions of the country. The objective was to enable the different actors to know the project better. It should contribute to the increase in economic activity in the Bagré region, with positive impacts and effects on the national economy through the development of commercial, agro-food processing, increase in the number of jobs created, increase in the value of the production and development of services. More than one thousand five hundred (1500) farmers have already had their plots and some have even started developing their property.

The major challenge remains mobilization of domestic and foreign capital for its implementation, hence the holding of the first investors conference in September 2012 in Ouagadougou. The meeting was the occasion to present to potential investors investment opportunities in *Bagrépôle* and identify their expectations in terms of support for implementation of their economic project. The State intends to grant facilities to investors, by offering them special incentives, namely the adoption of an attractive fiscal and customs system and a one-stop window for accomplishing all administrative procedures required for undertaking economic activities in *Bagrépôle*.

Since the promotion of growth poles is one of the objectives of the SCADD, after Bagre, the Government intends to create in the other regions growth poles in relation with their local resources.

3.3. Mining companies

The mining sector is considered as one of the major pillars of our economy. It has been booming since 2003, and constitutes today an important source of foreign currency for the national budget. As of 31 December 2012, all mining authorizations and permits have earned for the treasury, through taxes and mining royalties a total amount of one hundred and eighty-nine billion five hundred and sixty-five million two hundred and ninety-six thousand one hundred and twenty-eight (189,565,296,128) CFA francs, with respective share of 23%, 56% and 21% for revenues from services, taxes and custom duties.

Given the importance of mining in the socio-economic development of the country, the Government decided in April 2008 to initiate the accession of Burkina Faso to the Extractive Industries Transparency Initiative (EITI) in order to promote good governance and greater transparency in the management of this strategic sector for our country's economic take off.

The EITI promotes and encourages public discussions on management of public revenue from mining resources through the establishment and operationalization of a multi-actor monitoring system composed of three types of actors, namely the administration, mining companies and civil society organizations.

The involvement of civil society organizations, which are the mouth-piece of the populations in taking decisions aimed at promoting a healthy exploitation of mining resources, enhances the effectiveness of the EITI in the search for social and economic stability, as it enables mining companies to protect their investments.

Indeed, the publication of payments made by mining companies to the State enables the citizens to be informed about the fallouts of the mining industry and international private companies to be assured of the willingness of the Burkinabe Government to promote good governance in its mining sector.

For its sustained efforts in ensuring efficient and transparent management of financial flows between the mining companies and the State throughout 2012, Burkina Faso was raised on 27 February 2013 to the rank of EITI compliance countries by the Board of Directors of this initiative considered as an international standard of good governance in the area of exploitation of natural resources (mines, oil and gas).

Compliance with the EITI is a distinction that confirms the vigour, rigour, perspicacity and transparency with which Burkina Faso manages the exploitation of its mining resources. This means that the country has an efficient approach to periodic publication of the revenue from the mining sector and that the figures are available and accessible to the public, who can appreciate the contribution of the mining sector to the country's development.

It is the result of the combined efforts of the administration, mining companies and the civil society, which worked within the steering and supervisory committee of the EITI in Burkina Faso.

It is also the crowning achievement of an open, sincere and constructive dialogue between these actors which, in understanding and solidarity, totally committed themselves in the fight to make our country a model of transparent management in the mining sector.

The Burkinabe Government has effectively succeeded in ensuring the involvement of CSOs, which represent the grassroots populations and actors of mining companies in addressing issues relating to transparency in the mining sector.

Private actors of the mining sector and those of CSOs got strongly involved in the action for achieving this result (EITI compliance), an indication that Burkina Faso shows transparency and accountability in the management of income from the extractive industry.

3.4. Promoting corporate social responsibility

The Government's mission for the environment sector is to reduce the environmental degradation trends and improve the contribution of the sector to the national economy and welfare of the populations. This vision, which is in line with the ideals of sustainable development, is also in harmony with both the Accelerated Growth and Sustainable Development Strategy (AGSDS) and the National Rural Sector Programme (PNSR) by 2015.

The 4.2 sub-programme of the PNSR: "Sanitation of the environment and improvement of the quality of life" is closely linked to the environmental issues and challenges of the AGSDS. It is integrated into Objective 4 of the AGSDS entitled "Addressing cross-cutting priorities in development policies and programmes", particularly under sub-paragraph II.3.4.3 "Management of the environment and optimal use of natural resources".

In terms of environmental evaluations, the activities carried out in 2012 concerned consideration of five (5) terms of reference of environmental

impact studies of 64 reports of Environmental Impact Studies (EIS) and environmental audits through eight (8) sessions of the Environmental Assessment Technical Committee (COTEVE); monitoring the implementation of 31 Environmental and social management plans (PGES) and issue of 25 environmental feasibility notices for the Environmental Impact Notices (EIN) and 29 environmental compliance notices (environmental audit).

With regard to radiation protection and nuclear safety, training and information activities were conducted to take into account non-ionising radiation and administrative sanctions. They included notably the training of twenty (20) agents of the Presidential Security Regiment (RSP) on research, identification, and ionising radiation measures, training of competent persons in nuclear safety (PCR) for the industrial and mining sector; adoption of the new Law 032 of 8 June 2012 on nuclear safety, security and guarantees; preparation of an inventory of ionising radiation sources; inspection of 11 facilities hosting ionising sources and inventory of new radiology facilities, lightning conductors and smoke detectors in the city of Ouagadougou.

3.5. Promoting corporate environmental responsibility

Sub-programme 3.1 of the PNSR, entitled "Environmental Governance and Promotion of Sustainable Development" is an important and strategic part of the environmental policy of the Ministry of Environment and Sustainable Development. The objective is to achieve modes of consumption and production in order to enhance the sustainable productivity of renewable natural resources. The following are the achievements in 2012.

Promotion of environmental governance and sustainable development in Burkina Faso through the development of the national sustainable development policy, with an accompanying law; integration of the environment and sustainable development principles into sector policies, local development plans and programme-budgets; providing policy-makers, partners and citizens with environmental information through periodic publication of the Report on the situation of the environment in Burkina Faso (REEB), and the establishment of an observatory on the environment and sustainable development; coordination of implementation of agreements and conventions in the environment sector, taking advantage of financing opportunities to develop or assist other partner structures to develop enabling projects; offer actors tools and instruments for decision-making, evaluation (economic studies, sustainable development criteria and indicators, climatic and environmental data); development of the Strategic investment framework on sustainable land management (GDT); development and publication of a document on good GDT practices and distribution of 500 copies of the said document in hard copy and only in French; ratification of the Nagoya Protocol on access to genetic resources and fair and equitable sharing of the benefits from their use; development of the National policy on tropical zones and its 2013-2015 plan of action; adoption of the National Strategy for Development of Non-timber Forest Products (PFNL) with an accompanying law.

Concerning Climate Change Adaptation (CCA), several sensitization and information sessions were held, through which more than 120,000 people were reached, including farmers, more than 2,000 women and more than 500 school children.

4. SOCIO-ECONOMIC DEVELOPMENT

	HIV/AIDS control

		Sanitation	
		Access to new information and technologies	l communication
		Access to decent housing	
	Access to credit and youth	micro-finance, notably for w	omen and the

4.1. HIV/AIDS control

The extension of the national programme on prevention of mother-to-child transmission of the Human Immunodeficiency Virus (HIV) was pursued during the year 2012. The number of sites that had included Prevention of mother-to-child transmission of HIV (PMTCT/HIV) in their activities was 1,723 health facilities out of a total of 1770 in 2012, representing a coverage rate of 97.3%. One of the innovations was the application of the new protocols as part of the third phase of the 2011-2015 PMTCT programme. In 2012, the rate of testing pregnant women was 71.1% for an annual target of 69%. The HIV-positive rate was 0.78% in pregnant women tested, showing a slight decline compared to the rate for 2011, which was 0.9%.

4.2. Access to basic social services

4.2.1. Education

• Primary education

Activities for the year 2012 were carried out in a national context marked by the implementation of the Accelerated Growth and Sustainable Development (AGSDS).

We should also recall the plan of action of the EpT, aimed, among other things, at "increasing by 50% the rate of education of adults, particularly women by 2015 and ensuring for all adults, equitable access to basic education and permanent education programmes".

At the sectoral level, five important facts marked the implementation of activities in 2012. They include the adoption, by the Council of Ministers, of the Strategic Basic Education Development Programme (PDSEB 2012-2021), which includes the reform of the educational system and now covers the preschool, primary, general and technical post-primary and non-formal education, including vocational training; pursuit of the implementation of the National Literacy Education Acceleration Programme (PRONAA 2011-2015) through notably operationalization of the special literacy education campaign; the pursuit of activities as part of the process of transferring pre-school and post-primary education to the MENA; implementation of the Capacity Building Strategic Plan (PSRC) and intensification of the process of transfer of competencies and resources to the local and regional governments in the framework of implementation of the decentralization programme.

Under Strategic Objective 1 of the PDSEB "Improving access to formal and non-formal basic education" the activities carried out concerned increase in the offer and demand in NFE in relation with the national gender policy; promotion of non-formal education of adolescents; literacy education of young people and women; improvement of hygiene, health and nutrition conditions in NFE structures; coverage of training needs in the non-formal education sector; reduction of all kinds of inequalities in NFE; sensitization to ensure large support on the part of the populations for NFE programmes; and offer of total care for people living with disability in the NFE sector. In that regard, we may note the construction, improvement and rehabilitation of 43 educational infrastructural facilities for NFE, notably Non-formal basic education centres (CEBNF) and Permanent literacy education and training (CPAF); as well as the holding of literacy campaigns during the year 2012.

An initial ordinary campaign held between January and June resulted in the enrolment of **174,626 people**, 69.25% of whom are **women** and a second special campaign from July to December with **77,941** enrolments, of which 67.86% are **women**.

A total of 252,567 people were registered in the literacy education centres, 69% of whom were women.

For the Initial Literacy Education (AI) programme, an estimated **257,192 new learners were registered, including 154,315 women**, representing **98%** of the annual target.

The results by sex show that women are keeping the pace and are as successful as men, despite their multiple daily chores. Indeed, their rate of maintenance is 97% as against 96% for men, the success rate, estimated at about 92%, is the same for both sexes.

Those who registered for the literacy education sessions included local elected officials, soldiers in the barracks, women in the *Maisons de la femme*, workers in their work environments, blind and partially sighted persons using the Braille, adults in rural areas and rural folk in the *Centres permanents d'alphabétisation et de formation* (CPAF), as well as adolescents in the Non-formal basic education centres (CEBNF) and similar structures. A total amount of **CFAF 3,354,676,850** was mobilized by the State for promoting access to Non-formal Basic Education (NFE) in 2012, notably by ensuring the funding of more than 400 male and female literary education operators, which helped in opening more than 20,000 literacy education and training centres. This amount does not take into account the funding capacity building sessions of those declared literate and Specific Technical

Training (STT) of beneficiaries of NFE. In 2012, 42% of those declared literate received STT.

These training courses empower, socially and economically, beneficiaries of NFE declared literate. It should also be noted that the two literacy campaigns, conducted in 2012, resulted in the registration of more than **167,000** literate persons, including **153,767** trained according to the chain formula, of whom **103,595** were women. The chain formula enables the learner to be literate in the national language and initiated in oral French after 400 hours. One of the characteristics of literacy education in urban areas is that it was conducted in many cases with the help of Interactive Digital Tables (IDT). The use of IDTs in the non-formal education sub-sector is the product of the exemplary cooperation between Burkina Faso and the French Republic.

• Higher education

At the level of higher education, "student/inhabitant" ratio was 0.00423 during the 2011-2012 academic year for a forecast of 0.00489. In this subsector, the improvement resulted, in 2012, in the start of the construction of 7 halls of 2,500 rooms in the Universities of Ouagadougou, Ouaga II, Bobo-Dioulasso and Koudougou, the approval of the agreement for completion of transformation of the Zogona university campus into offices and laboratories and completion of buildings to be used as lecture halls.

Regarding improvement of the quality of higher education, 40 assistant lecturers and 5 researchers were recruited in 2011-2012. The Government also opened university restaurants in Ouahigouya and Fada N'Gourma, and disbursed 5 033,885 million CFA francs for feeding the students and granted scholarships in an amount of 2 876,031 million CFA francs, as well as loans and financial assistance amounting to 4 139,850 million CFA francs and offered transportation at the cost of 188,500 million CFA francs.

4.2.2. Potable water

Generally, access to potable water in Burkina Faso has improved over the years. Hence, in rural areas, the rate of access to potable water increased

from 58.5% in 2011 to 63% in 2012. An additional 735,886 people were provided with potable water in 2012. In urban areas, the rate of access to potable water in 2012 was 84%, representing an increase of 4 points compared to the level of 2011. In 2012, an additional 330,000 people were provided with potable water supply in urban areas.

In terms of potable water supply in rural areas, the Burkinabe State and its partners invested CFAF 30.7 billion in 2012 as against 31.4 in 2011. In urban areas, investment in the sector amounted to CFAF 12.694 billion in 2012.

Years	2009	2010	2011	2012					
Rate of access to potable	54.9	56.6	58.5	63					
water in rural areas (%)									
Rate of access to potable	72	75	80	84					
water in urban areas (%)									
Number of additional people	259,803	344,738	389 997	735 886					
served in rural areas									
Number of additional people	185,000	230,000	305,000	330,000					
served in urban areas									

Table 1: Access to potable water in rural and urban areas

Sources: Annual balance sheet reports PN-AEPA

4.2.3. Health

A 2013-2020 human resource for health development plan (PDRHS) was developed following the analysis of the situation of human resources carried out in 2010. The objective of the plan is to contribute to the improvement of the performance of the health system by providing the sector with adequate qualified and motivated human resources. The draft plan was approved by the different actors and adopted by the Council of Ministers on 24 April 2013.

The development of infrastructure was pursued with the start of the construction of the Manga and Ziniaré Regional Hospitals, mobilization of funding for the reconstruction of the Yalgado Ouédraogo Teaching Hospital (CHU-YO) and pursuit of the construction of new basic health infrastructural facilities, standardization of the incomplete infrastructure and equipment of

health facilities. These activities helped in reducing the theoretical average reach from 7.2 km in 2011 to 7.1 km in 2012. Besides, in health products, the new health facilities benefitted from supply of medicines.

In order to reduce lethality due to severe malaria in pregnant women and under-five children, the supply of first aid kits for managing severe malaria cases was pursued in 2012. Hence, 178,242 kits, including 139,500 for under-five children and 38,742 for pregnant women, representing 80% of the set target, were mobilized. Nevertheless, it is important to stress that all cases of severe malaria in under-five children and pregnant women were managed with kits subsidized by the State and the other partners for which the data are not available.

4.2.4. Electricity

To ensure regular electricity supply at less cost in Burkina Faso, the actions undertaken concerned the signing of the final funding agreement for the Bolgatanga (Ghana) – Ouagadougou interconnection project, at an estimated total cost of 56 billion CFA francs, including 36 billion for investments to be made on the Burkinabe territory.

To that were added the following actions: (i) selection of consultants to conduct the additional studies on the Han (Ghana) - Bobo-Dioulasso - Sikasso (Mali) - Bamako (Mali) power inter-connection project, (ii) completion of works to increase the 132 KV Kompienga - Bagre- Tenkodogo – Ouagadougou inter-connection power lines, (iii) pursuit of the construction of the 18 MW Komsilga thermal power station in the *Centre régional de consommation de Ouagadougou*, at a cost of about 18.8 billion CFA francs CFA, (iv) commissioning of the 37.5 MW second phase of the Komsilga power plant at a cost of 30 billion CFA francs, and (v) construction of a 37,5 MW third phase of the Komsilga power plant and a 33KV/90KV sub-station for evacuating power at a cost of about 34 billion CFA francs.

The improvement of electricity supply was pursued through: (i) the selection of a company to increase the capacity of the Bobo power plant by an additional 20 MW, at a cost of about 16 billion CFA francs, (ii) the establishment of a short list of consultants for conducting feasibility studies of the downstream Bagre hydro-electric power plant, (iii) the recruitment of companies for the construction of the Ouagadougou-Ouahigouya, Kaya-Dori and Kongoussi-Djibo inter-connections, the signing of memorandum of understanding between the countries concerned by the *"Dorsale Nord"* power inter-connection estimated at 59 billion CFA francs, and (v) supporting the booming mining sector, notably the proposed connection of Mana Gold Mines and Banfora Gold Project to the SONABEL network.

With regard to hydrocarbons, the process of updating the feasibility study of the Bolgatanga-Ouagadougou pipeline project effectively started.

4.2.5. Sanitation

In the area of sanitation, according to the national survey on access of households to family sanitation facilities conducted in 2011, the rate of access to family sanitation in 2010 was 3.1% at the national level. In other words, out of 33 households, only one household has access to family sanitation. In terms of environment of residence, the rate was 21% in urban areas as against 0.8% for rural areas.

In 2012, the rate of access to urban sanitation was 27%, representing an increase of 3 points compared to its level of 2011 for additional served population of 180,000 persons. Investments in the area of sanitation amounted to CFAF 3.430 billion.

Concerning sanitation in rural areas, 26,943 family latrines were constructed in 2012 at a total cost of CFAF 3.353 billion. This facilitated access to sanitation for an additional 269,430 people.

4.2.6. Access to new information and communication technologies

The main achievements in 2012, in the area of ICTs, are those implemented by the Digital Economy Department and concerned private actors, notably, mobile telephone companies and internet access providers (IAP).

At the national level, the context of the Telecoms/ICTs was mainly marked by the existence of national telecommunications and ICT market open to competition in all segments; the pursuit of the establishment of the regulatory framework with the development and adoption of the implementation of the different enforcement orders on the regulation of the sector, the regulation of electronic transactions and registration of domain names.

It is also important to mention the pending operationalization of the National ICT Promotion Agency (ANPTIC).

In 2012, licence for third generation mobile telephone system was issued to three mobile telephone operators.

There has been constant increase in telephone penetration in the area of mobile telephone; pursuit of the development and extension of government intranet (RESINA) through the commissioning of Wimax stations in 6 towns and implementation of communication and collaboration services.

We may also note the implementation of structuring projects for the development of Telecom/ICT infrastructure to meet the increasing needs in broadband connectivity at the level of transportation and access (PRICAO BF project, national Backbone project); construction and inauguration of Burkina-Ghana and Burkina-Niger optical fibre inter-connections; pursuit of the computerization of the main processes of the administration; development and start of operationalization of the sector cyber strategies (E-

gov, E-education, E-health and social protection of poor people, E-commerce and E-service for the rural world).

The year 2012 was also marked by the process of migration from analogue television to digital television and the regular holding of National Internet Week (SNI) and the other ICT activities.

In the private sector, the activities consisted in densification and extension of mobile telephone networks and access to internet.

The actions taken in 2012 produced the following results: one hundred and thirty (130) new localities are covered by the Airtel network, fifty-three (53) for Telecel and twenty-six (26) for ONATEL.

In terms of access to internet, during the year 2012, the Regulatory Authority registered three (3) new Internet access providers. As of 31 December 2012, forty-three (43) Internet access providers were declared on the market. In spite of these efforts, access to the Internet is still thwarted with enormous difficulties and the telephone operators hardly comply with their project specifications.

4.2.7. Access to decent housing

Since 2007, the construction of housing units is done under the 10,000 social and economic housing units programme initiated by the Government.

The programme facilitated the development of a regulatory framework for the construction of houses through public-private partnership.

Nearly twenty (20) real estate promoters were authorized, with the creation of the *Banque de l'Habitat du Burkina Faso* (BHBF).

Under the programme, a total of 1,145 housing units were constructed between 2007 and 2011. For the year 2012, 246 houses are under construction.

These achievements are presented in the table below, distributed by locality and by year:

YEARS	LOCALITIES	PROJECT	NUMBER	FUNDING
2007	Ouagadougou	Solidarité (sect. 19)	144	CEGECI
2008	Ouagadougou	Verte (sect. 30)	82	State

TOTAL			1,145	

4.3. Access to credit and micro-finance, notably by the youth and women

Achievements in this sector include notably the adoption of the national micro-finance strategy and its action plan, as well as the creation of a permanent micro-finance secretariat.

In 2012 and in the framework of job creation through the funding of microprojects, the Informal Sector Support Fund (FASI) financed 1,523 promoters of the informal sector, which helped to create 372 new jobs and consolidate 3,340 other jobs, for a total amount of CFAF 612,007,900.

As for the Employment Promotion Support Fund (FAPE), its contribution to the creation and consolidation of jobs was translated by the financing of micro-projects. Hence, in 2012, the FAPE received an allocation of CFAF 385,000,000 for funding micro-projects. To that end, 52 promoters benefitted from it, representing an equivalent of 156 consolidated jobs. In its mission of granting authorization to promoters, the FAPE pre-financed 6 promoters for an amount of CFAF 20,960,000, which contributed to the consolidation of 30 jobs. The FAPE also financed 13 projects for the youth, distributed in 13 regions out of a total of 32 funding requests.

The action of the *Fonds d'appui aux initiatives des jeunes* (FAIJ) helped in financing 79 young promoters, thereby creating 79 direct jobs. It should be noted that all these employment promotion funds are represented at the regional level by one-stop systems, which unfortunately do not have the capacity to approve the granting of credit. Their role is only limited to the receipt of applications at the regional level. It is therefore necessary to strengthen the capacities of one-stop shops for employment promotion to approve and grant loans.

5. CROSS-CUTTING ISSUES

_	Social ownership of decentralization
5	Corruption
	Gender promotion
	Youth employment
	Improving employability
	Agrarian reform

5.1. Social ownership of decentralization

Efforts towards the social and political ownership of decentralization focused on the formulation of the implementing regulations on decentralization and local development, publication of the General Local and Regional Government Code (CGCT), awareness raising and communication campaigns on decentralizedion and popularization of relevant good practices.

A review of the CGCT helped consider the institutional and legal framework of decentralization. Thus, Laws 2006-21/AN of 14 November 2006 and 2009-65/AN of 21 December 2009, amending Law 055-2004/AN of 21 December 2004 made a number of clarifications while attempting to address some concerns such as the crises in municipal councils and areas of competencies devolved to the regions.

Regarding the formulation of the implementing regulations of CGCT, two (2) decrees relating to the general statutes of the community of communes and the composition, duties, organization and functioning of the National Decentralization Commission were formulated and passed in February 2012.

Concerning the implementing regulations of Law 027-2006 of 5 December

2006 governing employment and staff of local governments, eleven (11) instruments were passed in February 2012 (see Annex 1).

The CGCT was published in 2012 and five thousand (5000) copies were issued and distributed among local councillors, staff of municipal and regional authorities as well as supervisory officials. The dissemination of the code contributed to enhancing the population's adherence to the decentralization process, seen as an instrument for developing territorial spaces.

Information and awareness-raising intended for the general public aim at social and political ownership of decentralization. In fact, decentralization represents a new vision of the relationships that must exist between the State, citizens and other officials involved in the management of public affairs at local level. This means a change in attitude and behaviour. In view of the specificities of target public, the dissemination channel must take into account gender and social minorities depending on the urban or rural area.

Umbrella structures such as the Association of Municipalities of Burkina Faso (AMBF) and the Association of Regions of Burkina Faso (ARBF) have been contributing to the promotion of citizen participation through the organization of "Commune Days" on a revolving basis.

The dissemination of decentralization good practices helps revitalize citizen participation and improve the effectiveness of the process. To support local development, nine (9) community radio stations were transferred to communes and associations operating in that domain. Furthermore, a prize for good practices called "Town Trophy" ("Trophée de la Ville") was instituted. Also, a document on the mechanisms enabling the population to question

the executives of local and regional authorities as well as a document on good practices were finalized. These were contained in a self-assessment of the performance of the communes published in three thousand (3000) copies. Thirty-six (36) communes made up of twenty-nine (29) rural communes and seven (7) urban ones were awarded prizes for excellence in local governance good practices.

Lastly, as part of the strengthening of coordination and management, the National Conference on Decentralization (CONAD) was transformed into the Regional Conferences on Decentralization (CORED). CORED constitute that of consultative frameworks embrace all the stakeholders decentralization at regional level. Thus, 13 CORED regional meetings were held from 9 to 23 October 2012, under the chairmanship of the regional governors of the regions, and provided an opportunity for local decentralization stakeholders to exchange views, particularly on the way communities function and the implementation of the decentralization process in general. Furthermore, the meetings helped garner the recommendations of the various stakeholders on the implementation of the decentralization process to be discussed at the National Decentralization Conference.

5.2. Corruption

To combat corruption in 2012, the internal audit structures of State, particularly IGF, ITS, ASCE and the external audit structure, namely the Court of Accounts (CC), carry out audits and investigations into the management of public resources and assets while attending to the effective application of regulatory instruments. In this regard, the Higher Audit Authority of State submitted its general report to the President on November 3 November 2013.

The Government undertook a review of the National Anti-Corruption Policy and its action plan adopted in 2006 and the ASCE embarked on a project to develop a monitoring and evaluation mechanism for the implementation of the said policy.

The situation of the country in relation to good governance should improve

thanks to the increasing desire of the authorities to make progress in this area.

On a visit to ASCE, the Prime Minister conveyed the firm willingness of the Government to fight corruption. He reassured the general public of the follow up actions the Government intended to take in relation to the recommendations of the 2011 report as well as those of other control entities of State. Already, eight (8) measures have been taken (Cf. Annex1).

On their part, civil society organizations engaged in this process continued their efforts through awareness-raising, advocacy and denunciation activities.

In order to contribute to anti-corruption efforts and, at the initiative of the anti-corruption network, "BURKINDI", two (2) parliamentary commissions of enquiry were set up, one on public procurement and the other on subventions in the health sector. After investigating abnormal practices, the commissions made recommendations to the National Assembly for greater transparency in the award and execution of government contracts. These include the following:

- Pass a public procurement law to replace the current decree, while strengthening other arrangements;
- Give special treatment to the staff of the General Directorate of Public Procurement and Financial Commitments (DGCMEF) by granting them a specific allowance as is the case for the staff of the WAEMU Public Procurement Regulatory Authority (ARMP) in all WAEMU member countries;
- Entrust to the General Inspectorate of Finance, the mission of monitoring the implementation of public procurement recommendations.

With regard to the fight against fraud, the General Directorate of Customs strengthened the mechanism for monitoring exemptions with regular verification of the final destination of exempted goods. This mechanism was bolstered with scanners at the dry ports of Ouagadougou and Bobo-Dioulasso. National conferences on corruption were held in December 2012. They helped carry out a diagnosis of corruption in Burkina Faso. The recommendations made were based, inter alia, on the firm application of instruments and sanctions against offenders.

In the area of public procurement, following the recommendations of the 2008 and 2009 public procurement audits, and those made at the first public procurement officials' forum, held in October 2011, innovations were made in 2012. They concern the raising of the threshold of requests for quotations by refining of the notion of the lowest evaluated bid, relaxing of procedures governing requests for bids examination based on the direct-contracting procedure and better support for local governments. Thus, the level of open competitive bidding was 89.70% for a set target of 85%; that of limited competition was 4.25% as against a target of less than 10%. However, the proportion of contracts signed based on direct contracting was 6.05% compared to a target of less than 5%.

5.3. Gender promotion

The reduction or elimination of gender inequalities constitutes a key condition for reducing poverty and sustainable human development. It is against this background that the Government undertook to formulate, with the support of its technical and financial partners, a National Gender Policy (PNG), adopted in July 2009 and operationalized through a Three-Year Operational Action Plan (PAO) 2011-2013, adopted in December 2010 under the institutional leadership of the Ministry of Women's Promotion and Gender.

According to PNG: « gender must be analysed in terms of disparities and inequalities between men and women by examining the various social categories for the purpose of greater social justice and equitable development».

In the same vein, the Government developed strategies for the promotion of greater social justice. This specifically entails the constitutionalization of gender, application of a quota system in legislative and municipal elections and the law on land and agrarian reforms and, lastly, the holding of a biennial national forum of women since 2008.

The national forum of women held in Ouagadougou in September 2012 reaffirmed the need to build the capacity of women through training, promotion of female entrepreneurship, employment creation and facilitation of access to technologies. To address these challenges, the need to combine the efforts of Government and those of its partners to mobilize CFAF 25 billion by 2013 was affirmed.

However, major challenges remain as the Minister of Women and Gender indicated as follows: "We must now take concrete action and know which sector we must focus on, attend to the economic empowerment of women and their access to credit and public services, support them technologically, and endeavour to train those who were elected to enable them defend the rights of women and qualitatively represent them".

Indeed, Law 010-2009/AN/ of April 16 2009 setting quotas was tested at the combined elections of 2 December 2012 but it did not yield the expected results. This law, which should contribute to increasing the number of women elected to decision-making bodies through elections, did not receive the necessary technical, financial and material support.

In the course of 2012 the ministry formulated the sectoral gender policy for ministries and a manual on gender mainstreaming in development policies, programmes and projects.

5.4. Youth employment

As part of the fight against unemployment, in 2012 the Government put in place a programme titled "Special Employment Creation Programme for Youth and Women (PSCE/JF)". The programme aims to foster access by young graduates to employment, facilitate access by young school dropouts and out-of-school youths to employment, build the productive capacity of rural youths and enhance access by women to production and processing 2012, the technologies. For the year direct beneficiaries of the implementation of the PSCE/JF activities totalled 52,559 youths and women. Jobs created by the programme are estimated at 55,537 including 26,545 direct jobs and 28,992 indirect jobs. In terms of youth occupation, the programme helped create 18,362 job positions. The number of beneficiaries of training stands at **7,209 youths and women**.

The main challenge noted in the PSCE/JF implementation relates to the delay in the release of funds. For the next editions, it is advisable that the Ministry of Economy and Finance releases the funds on a timely-basis.

Furthermore, 1,187 **youths** benefited from the implementation of the Driving License Operation in 2012. This helped build competencies and skills to facilitate the employment of the youth by private enterprises, household, public administration or in self-employment. However, it would be worthwhile allocating greater resources for the deconcentration of the operation to enable the broad participation by potential beneficiaries. It would therefore be advisable to deconcentrate the operation at the provincial level. The implementation of the programme in support of the socio-professional integration of young graduates helped train and find employment for 1463 **young graduates undergoing internship.** This action, implemented by the National Employment Agency (ANPE), helped enhance the employability of tertiary education graduates through internship, training in job search techniques and entrepreneurship. Furthermore, in 2012, ANPE supplied 28 installation kits to trained youths.

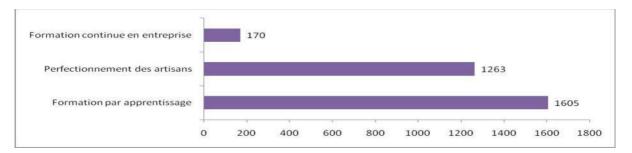

As part of the development of technical and vocational skills, 420 youths

were trained at the Ziniaré Model Vocational Training Centre (CFPR-Z) over the 2011-2012 period.

At the Ouagadougou Evaluation and Vocational Training Centre (CEFPO), **108 learners have been undergoing training** since it was established in 2010. They will constitute the first group of students to graduate in June 2013 with a professional diploma in civil engineering, electricity, auto mechanics, metalwork and office automation equipment maintenance.

With regard to the funding of vocational training, the Vocational Training and Apprenticeship Support Fund (FAFPA) satisfied 180 funding applications. The total cost of the grants amounted to **CFAF 316,702,179** for 3038 beneficiaries made up 954 men and the rest representing 68.59 % of women.

<u>Chart:</u> Distribution of FAFPA beneficiaries by type of training in 2012

Source: ONEF (2012), Annual Report on Employment

In the area of certification, the permanent secretariat of the National Certification Commission (SP/CNC) was able to organize the 2012 session of the Professional Qualification Certificate (CQP) examination. This **saw the registration of 2,683 applications** and the **effective presence of 2,354 candidates** in ten (10) trades in the eight (8) main towns selected to serve as examination centres. The examination resulted in the passing of **1,817 candidates representing a 77.18% success rate.**

5.6. Agrarian reform

In the area of security of land tenure, measures aimed at enforcing Law 034-2009/AN of 16 June 2009 on the rural land system were pursued through:

(i) the holding of 68 workshops out of the projected 98 for setting up land tenure security structures, (ii) conducting of 68 information/awareness sessions out of the projected 178, for the benefit of 3407 stakeholders on the National Rural Land Security Policy (PNSFMR) and Law 034, including its implementing instruments. The following activities were also conducted: (i) broadcasting of a TV programme on the policy and the land act, (ii) training of 6911 stakeholders in the use of land tenure security tools out of the projected 6,460 stakeholders, (iii) holding of 72 workshops on the dissemination of terms of reference for the benefit of 3191 producers, (iv) deconcentration of the National Committee for Rural Land Securitization (CONA/SFR) in the Boucle du Mouhoun region, (v) putting in place 10 rural land services, 551 village land commissions, 419 village land reconciliation commissions and (vi) the issuance of four implementing orders on rural land including the one on "levying of the tax for the issuance of rural land possession certificate".

CONCLUSION

From the analysis of the results in the report, it is clear that considerable efforts were made in the area of governance in Burkina Faso. But major challenges to development indicate that further efforts must still be made. Thus, in the areas of democratic and political governance, the consolidation of rule of law and entrenchment of democratic culture must be deepened. This requires the stability of republican institutions through effective separation of powers and strengthening of the balance of powers.

In the face of the growing lack of public spiritedness, the broad-based consultations held resulted in the proposal of areas of consideration that should lead to medium and long-term solutions.

On the economic front, relinquishing of the Poverty Reduction Strategic Framework (PRSF) in favour of the Accelerated Sustainable Development Strategy (ASDS) is producing encouraging signs.

Despite these glimmers of hope, the search for double digit growth targeted by the ASDS requires an improvement in the mobilization and management of public resources through a permanent and rigorous control, particularly, better public procurement management. The fight against corruption must therefore be pursued and intensified through the various institutions in responsible for addressing the issue.

In the area of economic governance, the measures aimed at increasing the influence of populations in formulating, implementing and assessing public policies. Furthermore, it would be worth pursuing the equitable distribution of the fruits of growth through basic social services. Regarding corporate governance, progress was effectively made in improving the business climate. However, the improvement of the judicial system must be pursued for even more convincing results.

Lastly, the human and material resources of the APRM Permanent Secretariat must be strengthened to enable it accomplish its mission effectively. ANNEX: NATIONAL PLAN OF ACTION IMPLEMENTATION PROGRAMME
